

EXCHANGE ACCOUNT SETUP GUIDE FOR IPHONES

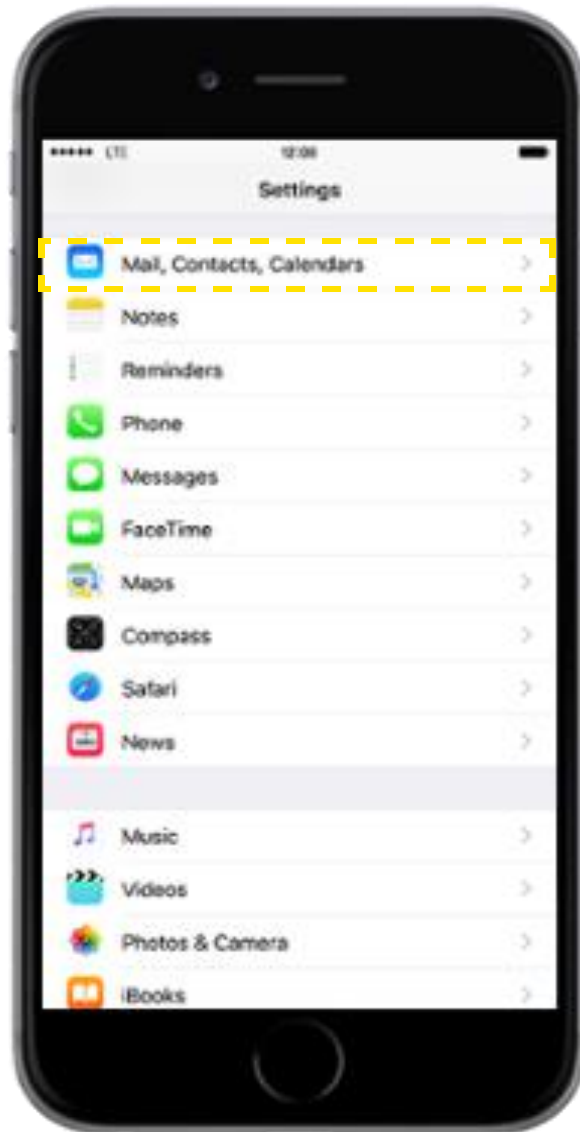

GET READY

You'll need your email address, your Windows username, and your Windows password to set up your iPhone with the (Company Name Here) Box Exchange mail server.

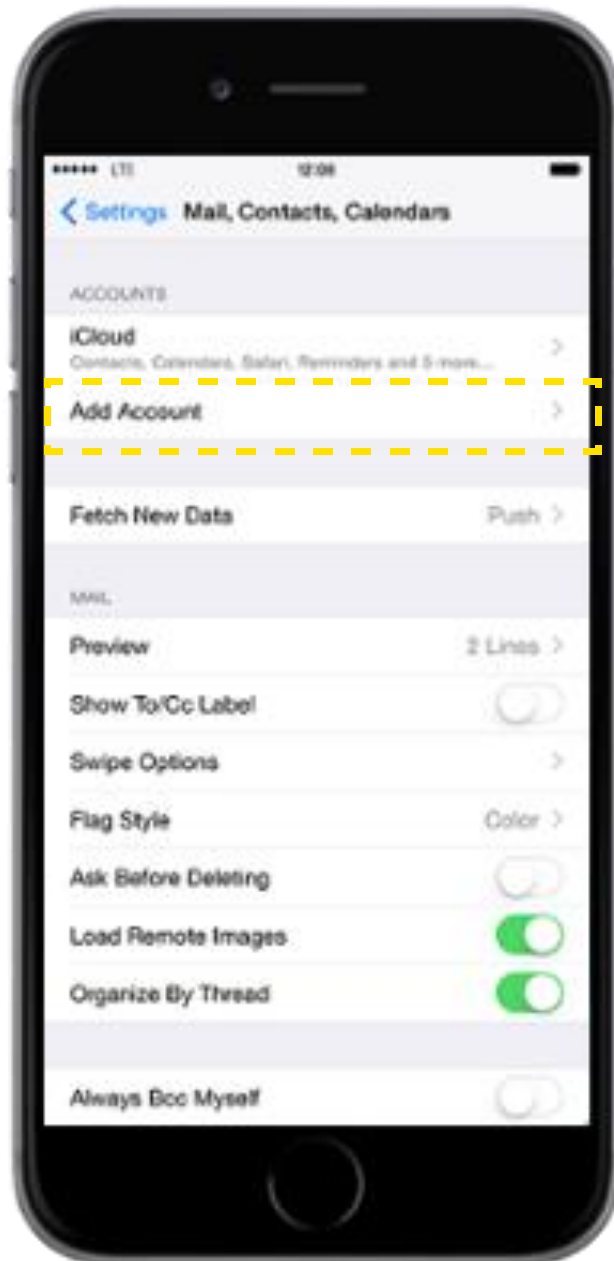

From the home screen, tap Settings

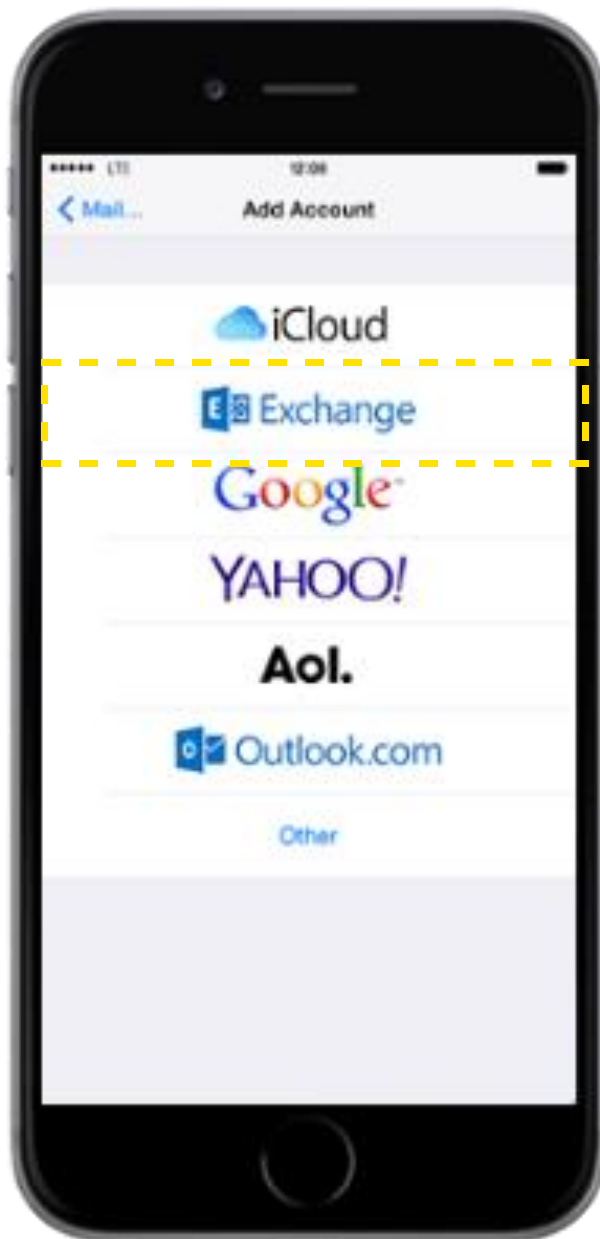

Scroll down and tap Mail, Contacts, Calendars.

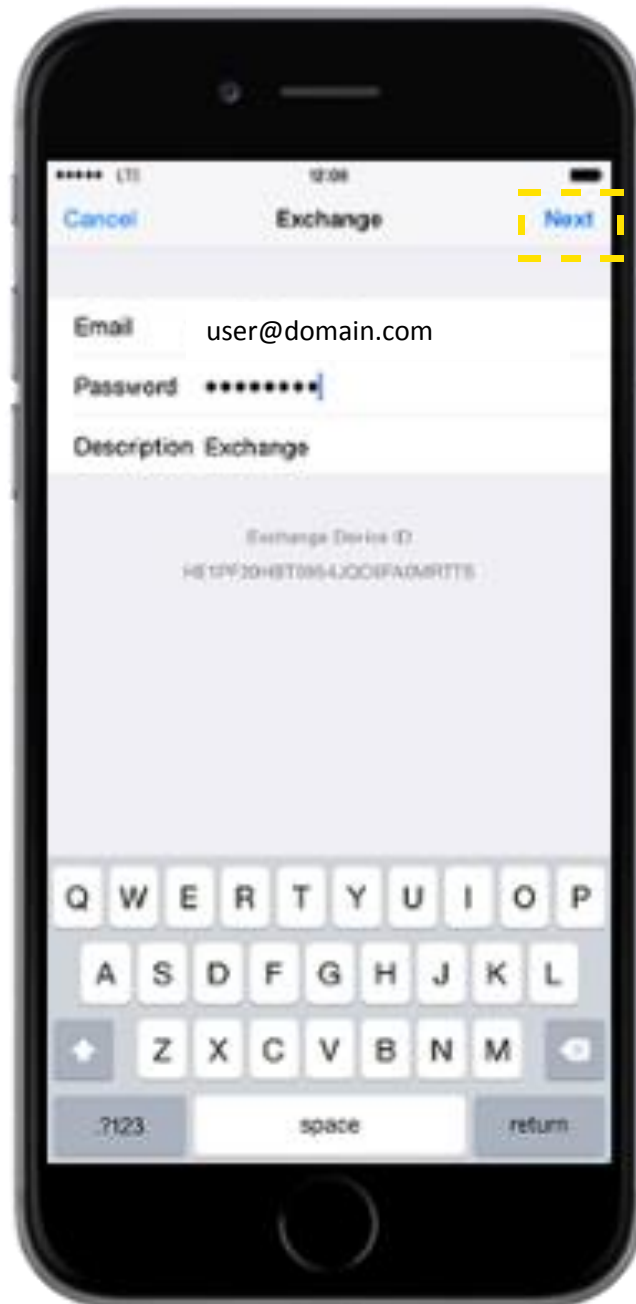

Tap Add Account.

Tap Exchange.

Enter your email address and password. The password will be the same as the one you use to login to your work computer.

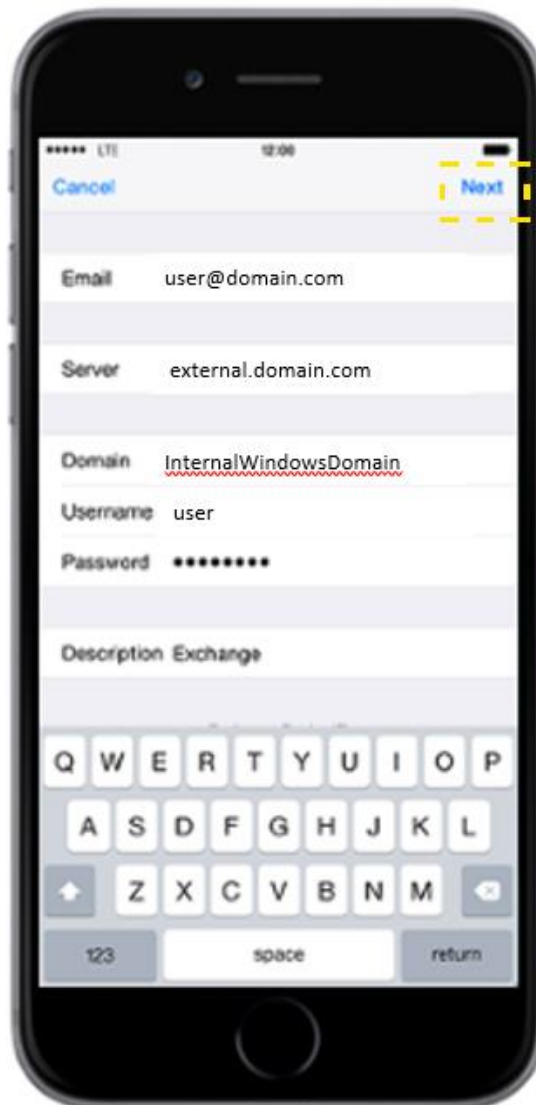

Tap the Server field and enter your web mail address.

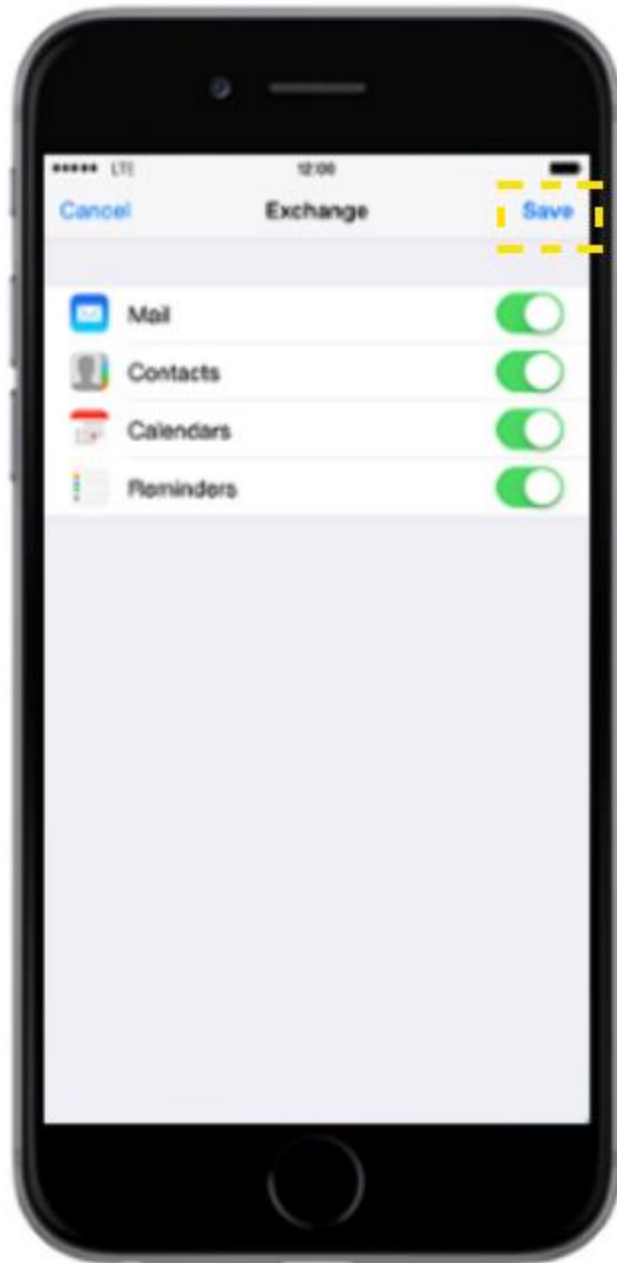

Tap the Domain field and enter your internal Windows domain name.
An easy way to find this is to hover your mouse over the network icon on your PC's taskbar:

Tap the Username field and enter your Windows username. This will be the same username you use to login to your work computer.
When finished, tap Next.

Tap Save.

The Microsoft Exchange account is now set up. You may need to restart your iPhone for mail to begin syncing.
